Claims: I claim:

11.(new) A putter head comprising:

- (a) a shaft centrally located and extending into said putter head,
- (c) said putter head and said shaft having pivotal means for joining said putter head to said shaft at approximately the center of said putter head, whereby when striking a ball off center said putter head would pivot.

12.(new) The putter head of claim 11 further including viewable indicia on said putter head.

13.(new) The putter head of claim 12 further including a line as a position indicator on said putter head.

14.(new) The putter head of claim 11 further including a tapered piece centrally located on said putter head and said shaft with means for securing said tapered piece to said shaft.

15.(new) The putter head of claim 14 further including viewable indicia on said tapered piece.

Patent Application of Jerry S. Trainello - Page 10

Application Number: 10/614,579 Art Unit: 3711

Examiner: Sebastiano Passaniti

- 16.(new) The putter head of claim 15 further including a line as a position indicator on said tapered piece.
- 17.(new) The putter head of claim 11 wherein said putter head can rotate around said shaft.
18. (new) The putter head of claim 11 wherein said shaft can rotate around said putter head.
19. (new) A method of rotating a putter head and shaft comprising:
 - (a) providing said putter head and said shaft with means to provide rotational movement of said putter head around the axis of said shaft,
 - (b) providing said putter head and said shaft with indicia to visually show said putter head rotation,
whereby with the inclusion of said indicia and the amount of rotation of said putter head the golfer will visually see where on said putter head the ball struck.
20. (new) The method of claim 19 wherein said putter head can rotate completely around said shaft.
